Project 2010 64 Pt Br Torrent This is a tutorial showing you step by step how to download Project 2010 64 Pt Br Torrent. Windows, Seven, and Window 8 already have Project 2010 installed so you can skip this part. If you're still on XP or Vista, then the following instructions will help you locate the program. 1) Go to Microsoft website here: http://www.microsoft.com/en-us/download/details.aspx?id=35 (Select your operating system). 2) Download the file for your operating system (this may take some time). 3) Unzip the file. 4) You will have a RunMe.bat file and a directory with some files and folders. 5) Open this directory. Don't run the .bat file just yet, though you will have to eventually! 6) Right click on the Microsoft Project 2010 installer and select properties from the pop-up menu.. 7) In the Products Tab.. deselect "Enable launch of this program when Windows starts". Leave all of the other boxes unchecked too, but select "Install for all users" in step 8...then click ok. This will allow everyone to install your program even if it doesn't have a pass or certificate on its own. 8) In the file location box, browse to the RunMe.bat file and click ok. 13) On my system, it will say that the program is being installed for all users.. then complete successfully with a message indicating that "you have been successful" 14) Now open the RunMe.bat file. A computer icon will come up which you'll have to tell what operating system to try and install on here. Select "Windows 7" from the popup window which should appear....then click OK. 15) You have now launched this installer for Windows 7 or 8! It will not work for an older OS, so don't even bother trying... This is important! 16) A small box pops up.. click "Install" by default. 17) The installation may take a while. When it finishes, it will ask if you want to register the program...click "No". 18) If all goes well, you should get a message indicating that you have successfully installed Microsoft Project 2010. 19) Go to Control Panel > Add/Remove Programs > select Microsoft Project 2010 64 Pt Br Torrent and click "Change/Remove". If the program is no longer in the list (which I assume it will be in most cases), then rerun the setup and let's start over... 20) This time, when the installation finishes, you should see the program installed and ready to use. ...done!
